

VIDEO SURVEILLANCE

How can you get more out of your video management system?

Video surveillance is facing a fundamental shift. What was once a standalone monitoring tool is now expected to act as a central intelligence layer—supporting security, compliance, and operational efficiency at the same time. Organizations are under pressure from evolving security threats, stricter cybersecurity and privacy regulations, and growing operational complexity across sites and systems. At the same time, video data is increasingly expected to deliver business insights, not just forensic evidence. To succeed, video management systems must move beyond basic recording and manual monitoring—towards open, integrated, and intelligent platforms.

Siloed security operations

67% of organizations struggle with integrating multiple security systems, leading to inefficiencies and increased risk.¹

Elevated security and compliance demands

54% of security professionals cite compliance with regulations as a major challenge, impacting their ability to maintain effective security measures.²

Complex security operations

72% of organizations experience delays in incident response due to the complexity of managing multiple security systems.³

Why yesterday's video surveillance approaches **can't handle tomorrow's risks**

Outdated video surveillance approaches expose organizations to growing risk. Siloed systems create blind spots and slow incident response, while manual monitoring increases false alarms, operational costs, and operator overload. Closed platforms limit scalability and adaptability as requirements change. When security architectures are designed for outdated regulations, compliance gaps and cybersecurity exposure increase. As threat landscapes and regulatory pressure intensify, traditional video surveillance models become a liability to safety, business continuity, and reputation.

SIEMENS

SIVEILLANCE VIDEO

To get more out of your video surveillance management system, you need to look towards a **unified approach**

With Siveillance Video you can streamline your security operations, reduce operational costs, and respond to incidents faster and more effectively. The result is a **safer, smarter, and more compliant environment**.

Unify all security systems seamlessly

Integrate with access control, intrusion and building systems, centralize security operations across sites and teams, use one platform as the single source of truth

Automate threat detection and response

Detect threats intelligently with analytics and AI-assisted search, trigger automated workflows and event-based responses, reduce manual effort and operational inefficiencies

Safeguard your business

Cyber-resilient architecture, ensure privacy, compliance, and secure evidence handling, keep systems up to date through continuous software maintenance and services

Positive results

Customer objectives

A multi-site real-estate company sought a future-ready video management solution that could seamlessly integrate with existing security systems, reduce operational complexity and response times, ensure compliance and cybersecurity, and scale as risks, regulations, and business needs evolved.

Siemens solution

Siemens implemented Siveillance Video as the central platform of a unified security architecture—enabling open system integration, centralized multi-site management, automated event handling, and intelligent analytics, supported by cybersecurity-by-design and end-to-end lifecycle services.

Positive results achieved

The organization achieved faster and more consistent incident response, reduced operator workload and false alarms, improved compliance readiness, and enhanced situational awareness—while unlocking video data as a source of operational insight beyond security.

SIEMENS

About Siemens

Our technology empowers customers to transform the industries that form the backbone of economies: industry, transportation, buildings and grids. Our solutions accelerate the digital transformation of multiple industries, to scale sustainability impact.

Contact us

Take the next step towards a unified security approach. Siemens brings proven expertise to every partnership. With more than 62,000 security systems installed worldwide, securing over 60 million people, and recognized as a leader in integrated security software, we understand the complexity of modern operations. Siveillance Video ensures your business is secure and security operations are as efficient as can be. Backed by 300 global locations and 10,000 service specialists, we ensure successful implementation and help you build resilient, compliant, and strategically aligned security operations.
