

SIPASS INTEGRATED

How can you simplify your **access control management?**

Access control and building security are facing unprecedented change. Digital transformation is driving the shift from isolated, analog systems to integrated, intelligent infrastructures—requiring seamless integration with building management, video surveillance, and cloud technologies. Security and compliance demands are intensifying, with stricter cybersecurity standards, multi-factor authentication, and comprehensive audit trails now essential. At the same time, organizations need flexible, scalable systems that support centralized management, automated workflows, and real-time analytics to keep pace with operational complexity and user expectations.

Digital transformation of buildings

Wireless & mobile access control systems have overtaken wired-only deployments reflecting the shift to integrated, intelligent infrastructures.¹

Elevated security and compliance demands

66% of organizations prioritize security over convenience in office settings, with contactless biometrics expected to surge at a 17.4% CAGR through 2030.²

Operational agility and user-centric design

Organizations with centralized access control platforms reduce security administration time by over 40% while improving incident response and audit readiness.³

Why yesterday's access control management **can't handle tomorrow's risks**

Relying on outdated access control methods leaves organizations dangerously exposed. Siloed systems that don't integrate with other security disciplines create critical blind spots and slow down response. Manual credential management is not only slow and error-prone—it opens the door to unauthorized access. Legacy keycards are easily lost or duplicated, lack audit trails, and are a nightmare to manage at scale. These vulnerabilities persist and put both security and operational efficiency at serious risk.

SIEMENS

SIPASS INTEGRATED

To simplify your access control management, you need to look towards a **unified approach**

With Siemens SiPass integrated, you'll experience streamlined operations, enhanced safety, and full regulatory compliance—while future-proofing your infrastructure for tomorrow's challenges.

Enhance operational control

Automate access workflows, centralize multi-site management & integrate building systems

Maximize security & compliance

Protect digital & physical assets, harden access control & ensure auditability

Future-proof your business

Scale with your business, embrace mobile and cloud & maintain securely

Positive results

Customer objectives

An airport required a future-proof access control solution that integrated seamlessly with their identity system. At the same time improvement of operational efficiency and reduction of staff training costs was required.

Siemens solution

Siemens delivered SiPass integrated as part of a unified security solution. Additionally, advisory services and dedicated on-site and off-site specialized Siemens engineers and service staff ensure that the system is always maintained securely.

Positive results achieved

Customer achieved increased performance and efficiency in security operations, ensured improved security and could take full advantage of digitalization benefits like utilizing AC data for process optimizations.

SIEMENS

About Siemens

Our technology empowers customers to transform the industries that form the backbone of economies: industry, transportation, buildings and grids. Our solutions accelerate the digital transformation of multiple industries, to scale sustainability impact.

Contact us

Take the next step towards a unified security approach. Siemens brings proven expertise to every partnership. With more than 62,000 security systems installed worldwide, securing over 60 million people, and recognized as a leader in integrated security software, we understand the complexity of modern operations. SiPass integrated ensures your business is secure and access control operations are as efficient as can be. Backed by 300 global locations and 10,000 service specialists, we ensure successful implementation and help you build resilient, compliant, and strategically aligned security operations.
