

SIEMENS

ENVIRONMENTAL PRODUCT DECLARATION/  
PRODUCT ENVIRONMENTAL PROFILE

# Acvatix™ - Electromotoric Short Stroke Actuators

## SAS..., SAT... Actuators

Type III according to ISO 14025

<b>Owner of the declaration:</b> Siemens Switzerland Ltd	<b>Program holder and publisher:</b> PEP Ecopassport
<b>In compliance with:</b> ISO 14025; EN 50693:2019; PCR-4-ed4-EN-2021 09 06; PSR-0005-ed3.1-EN-2023 12 08	
<b>EPD Type:</b> Representative product with extrapolation rules for homogeneous product family	<b>EPD scope:</b> Cradle to Grave

# General information

This environmental product declaration (EPD) is based on the international standard ISO 14025 (“Environmental labels and declarations — Type III environmental declarations”). The data in this EPD has been evaluated on a full-scale life cycle assessment (LCA) study according to ISO 14040/44, taking into account the product category rules (PCR) for electronic and electrotechnical products and systems defined in EN 50693:2019 as well as PCR-4-ed4-EN-2021 09 06 Product Category Rules for Electrical, Electronic and HVAC-R Products and PSR-0005-ed3.1-EN-2023 12 08 – SPECIFIC RULES FOR Electrical switchgear and control gear solutions, product category Other Equipment

Siemens is dedicated to an environmentally conscious design of its products in line with IEC 62430 and has implemented an integrated management system according to ISO 9001, ISO 14001 and ISO 45001.

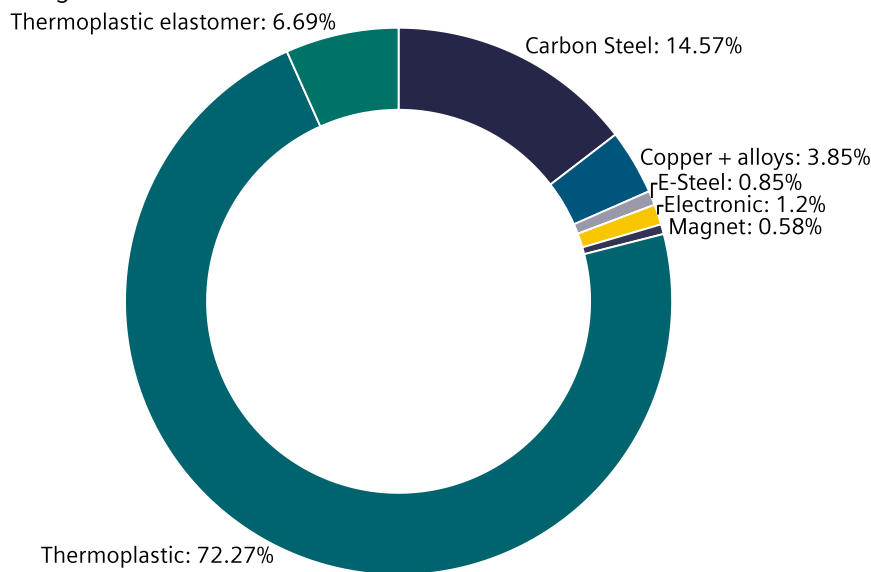

<b>Products</b>	All products which can be found in the appendix.
<b>Represented by</b>	S55158-A100 (SAS61.03)
<b>Product Description</b>	For the operation of Siemens 2-port and 3-port valves:, type series VVG549.. , V.G44.., used as control valves in heating and ventilation plants in closed loops.
<b>Functional Unit</b>	Measure and control the temperature in HVAC closed-loop systems by mechanically actuating the position of a [2-port or 3-port] valve with a stroke of 5.5 mm, using [modulating / 3-point] control with [spring return / nonspring return] mechanism, for applications with 2.5% runtime, over a reference lifetime of 10 year.
<b>Production Site</b>	Zug, Switzerland

# Material composition

The product weight of 0.41 kg combined with the packaging weight of 0.04 kg results in a total weight of 0.45 kg. The following chart outlines the overall material composition of the reference product, excluding packaging. Packaging consists of: Screws (galvanized), Graphic paper, Wooden pallet (single use).

The product, including packaging, consists of 18.58% metal, 71.63% plastics, and 9.79% other materials.

Product Weight 0.41 kg

# Substance assessment

At Siemens, we are committed to the development and production of environmentally sound and sustainably produced equipment. This includes avoiding hazardous substances in our products without compromising their benefits for our customers.

Please visit the following website to learn more about how we comply with product-related environmental regulations like RoHS, REACH, WEEE and others: [Product Related Environmental Protection](#)

## System boundaries and scenarios

The EPD covers the cradle to grave of the product including the following stages.

Manufacturing stage			Distribution	Installation	Use stage								End-of-Life stage				Benefits & loads beyond system boundary
Raw materials	Transport	Production	Transport	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-Installation	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling Potential	
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D	
X	X	X	X	X	0	0	0	0	0	X	0	0	X	X	X	X	

### Temporal and geographical scope and representativeness

Primary data of FY2023 for BOM and inbound transport and FY2024 for factory consumption and outbound transport; Secondary data: LCA tool: Green Digital Twin Version 4.0, Database: One Siemens LCA Database (based on MLC CUP 2024.1). The materials and components used in production are globally sourced and have been selected from Sphera data sets according to the global or regional representativeness.

### Data quality

Both primary and secondary data are used. To ensure the high quality and completeness of the LCA results, primary data have been used whenever possible. The main sources for primary data are the bill of materials and the bill of processes. Site specific data are provided by Siemens reporting system. Datasets for resources, such as electrical energy or natural gas, are chosen from the region where the device is produced and assembled. If primary data are not available, datasets reflecting state-of-the-art manufacturing technology are considered. Generic data originating from the LCA tool: Green Digital Twin Version 4.0, Database: One Siemens LCA Database (based on Sphera MLC CUP 2024.1).

### Allocation

Waste treatment processes are allocated to the product system that generates the waste. The environmental burdens of recycling and energy recovery processes are therefore allocated to the product system that generates the waste, while the product system that uses the exported energy and recycled materials receives it burden-free. Potential benefits and avoided loads from recovery and recycling processes are considered in separate Benefits & Loads beyond system boundary section.

**Cut-off** According to EN 50693:2019 and PCR-ed4-EN-2021 09 06, the cut-off criteria can be set to a maximum of 5% of the overall environmental impacts. In this LCA, metal manufacturing scrap EoL has been excluded as the total overall impacts are below 1%.

## Scenarios:

The following information describes the scenarios in the different modules of the EPD.

<b>Manufacturing</b>	This stage covers the extraction of natural resources, production of raw materials, manufacturing, packaging, and upstream transportation.
<b>Transportation to production site</b>	Primary data and EN 50693:2019
<b>Production energy model used</b>	A1: Global; A3: Switzerland (Electricity grid mix 1kV-60kV; AC, technology mix; consumption mix, to consumer; 1kV - 60kV (en))
<b>Distribution</b>	This stage covers the product's distribution.
<b>Distribution: Transport model use</b>	Truck (20-26 t) 942 km
<b>Installation</b>	This stage covers the End-of-Life treatment of transport packaging.
<b>Installation: Energy model used</b>	Not relevant
<b>Use</b>	This stage covers the operational energy use. All other modules do not apply for this product. Different operating conditions can lead to deviations from the reference scenario.
<b>Use: Energy model used and use scenario</b>	B: Europe (Electricity grid mix 1kV-60kV; AC, technology mix; consumption mix, to consumer; 1kV - 60kV (en)) Energy consumption in standby 1.71 W and run 2.71 W; 2.50% runtime Reference lifetime 10 years
<b>EoL</b>	This stage covers the disassembly, material recycling in addition to thermal treatment of all recoverable materials and the disposal of all other materials.
<b>EoL: Transport model use</b>	Road Truck, 20 - 26t gross weight 1000.0 km
<b>EoL: Energy model used</b>	C & D: Europe

# Life cycle assessment - results

The following impact categories characterize the product’s environmental footprint. They have been calculated with characterization method EN15804+A2 (EF3.1); LCA tool: Green Digital Twin Version 4.0, Database: One Siemens LCA Database (based on MLC CUP 2024.1).

To ensure the high quality and completeness of the LCA results, primary data have been used whenever possible. Datasets for resources, such as electrical energy or natural gas, are chosen from the region where the device is produced and assembled. If primary data are not available, datasets reflecting state-of-the-art manufacturing technology are considered.

## Additional environmental information

### Climate change

This chart shows the overall impact of the product on climate change – total. The operations phase is the lifecycle phase with the biggest overall impact. Different operating conditions can lead to deviations from the reference scenario.

### End-of-Life results

The end-of-life stage was modelled by shredding of the device, followed by sorting and material separation process.

It leads to:

- an overall product recyclability of up to 15%
- an energy recoverability of up to 40%
- a minimum disposal rate of 46%

The exact final values depend on the used recycling process and add up to 100%. Calculation is done based on the applied default recovery rates according to the PCR and is consistent with the impacts displayed in the LCA.

**Note:** The device should not be disposed of as unsorted municipal waste. Special treatment for specific components may be mandated by law or recommended for environmental reasons. Observe all local and applicable laws.

# Appendix

## Scaling factors

The results of the LCA of the reference product can be extrapolated to other products of a homogeneous product family according to the standard EN50693. The scaling factors listed here are calculated according to this standard.

The extrapolation rules have been defined as follow:

- Manufacturing (A1-A3):  $\frac{m_{plastics,i} + m_{metals,i} + 13 \cdot m_{PCBA,i} + m_{others,i}}{m_{plastics,ref} + m_{metals,ref} + 13 \cdot m_{PCBA,ref} + m_{others,ref}}$
- Distribution (A4):  $\frac{m_{product,i}}{m_{product,ref}}$
- Installation (A5):  $\frac{m_{product,i}}{m_{product,ref}}$
- Use Phase (B1-B7):  $\frac{m_{annual\ power\ consumption,i}}{m_{annual\ power\ consumption,ref}}$
- End of life (C1-C4):  $\frac{6 \cdot m_{plastics,i} + 0.01 \cdot m_{metals,i} + 1 \cdot m_{PCBA,i} + 0.04 \cdot m_{others,i}}{6 \cdot m_{plastics,ref} + 0.01 \cdot m_{metals,ref} + 1 \cdot m_{PCBA,ref} + 0.04 \cdot m_{others,ref}}$
- Benefits & Loads (D):  $\frac{1 \cdot m_{plastics,i} + 4 \cdot m_{metals,i} + 19 \cdot m_{PCBA,i} + 2 \cdot m_{others,i}}{1 \cdot m_{plastics,ref} + 4 \cdot m_{metals,ref} + 19 \cdot m_{PCBA,ref} + 2 \cdot m_{others,ref}}$

To extrapolate the impact from the reference product to another product from the range, multiply the following scaling factors to the impact category per life cycle stage from page 5:
